

Tomorrow's aspirations.

solid, stylish, new –
The *alpha grid* range

ABB

Provide the comfort you yourself would desire. *alpha grid* can expand.

The *alpha grid* range combines maximum user comfort in the smallest spaces.

Switches, fuses or ventilation - the combinations are flexible. The range comprises more than 20 different, easily fittable modules, which can be changed without problem.

The electrical installation in hotels, public buildings or administrative buildings must combine two principles. Firstly: it must not overtax people. The function must be obvious. Otherwise the comfort offered will not be used. The installation should help people to feel comfortable. The

second principle is of interest to the user of the building: the installation must be long-lasting. In addition, it must be easy to alter, as the requirements may change frequently. This includes being easy to install, so that conversion doesn't result in a major project and can be carried out

quickly on the side. *alpha grid* fulfils these principles perfectly. With regard to ease of use, functional versatility, and also durability and flexibility, this range is unique.

Photo archive: Mercure Grand Hotel, Dortmund

Easy to use and robust –
ideal for users and operators
of functional buildings of
all kinds.

Reference object: Four Seasons hotel, Hamburg

palladium

Maximum flexibility: switches or buttons, fuses, load displays and much more.

platinum

The design is available in titanium, platinum and palladium. The material is extremely hard-wearing.

titanium

The individual modules can be simply snapped into place. The clear designation makes them easily identifiable.

The range offers single, double or triple frames of two different widths. There is space for maximum 12 modules.

*The colours are matched to the *alpha bs*® range, and can therefore be combined easily.
